## Customer Reviews

Since I started working my 2nd job to bring in more income, I'm able to afford some GMO-free foods by switching back to organic. And let's just say, I feel better when I work, and eat the different organic foods I've been eating, I rest better too, my knees don't hurt at night anymore like they use to, and I have more energy than before. With this book you wrote, it has really made me feel better about myself as a person. I never knew I'd grow up to have a book to change, and save a life like yours but, I am very glad I did. Like my husband has mentioned, if only people would read your book, and see the truth behind the food we eat today. As a result, I really do appreciate your book a lot. This allows me to focus on me, and my own future ahead for when I have my own kids. I just wished people weren't so blinded by the food in the store! It makes me so sad to see when people eat a lot of foods I know is bad for them, knowing they will stroke out, or have a heart attack later, and become a diabetic, along with contracting many other diseases people receive later on in life. I believe this is also why I've been a huge health nut because, not only did I see what my mother went through when I was a kid, but I also see what others go through today with health problems. It sends reminders to my mind to focus, stay positive, and stay GMO-free. Again I really thank you a lot for this book. My hope is that people will listen to you, and not ignore. I'm really very proud of this GMO-free child book, with high hopes that everyone all around the world will do an act of listening to the truth of the foods they not only feed themselves, but what they feed their children. In conclusion, once I received my free review copy of GMO free child I was instantly inspired, knowing that this book has to be the next biggest seller world wide. Live, Laugh, Love ÃfÂ Ã Å, Æ

This book is listed as one of the best publications in 2016 (ÃfÂçÃ â ÑÃ Å“GMOs: The Best and Worst of 2016,ÃfÂçÃ â ÑÃ Å• Ban GMOs Now; February 2, 2017). It is listed for a number of reasons. It is highly recommended as a useful source for those who would like to learn some basic history and information about GMOs. GMOs are ubiquitous in our food supply and yet relatively few people know this and many donÃfÂçÃ â ÑÃ â,çt understand what they are. As a result, they may not be aware of or fully understand the many concerns that people have about them. Having a basic

understanding about GMOs is especially important for all parents; just as parents know the importance of feeding their children healthier food (less sugars, fewer processed foods, more vegetables, etc.), a growing number of parents understand that it is equally important to have an awareness about GMOs and the pesticides and herbicides that are associated with them. These unique food products have never existed in nature before are not required to undergo long-term chronic toxicity studies on a case-by-case basis (nor are there any requirements for post-marketing studies); consequently some parents have decided to exclude GMOs from their children's diets and in some cases, they witness a concurrent improvement in the health of their children. The book is well-written and well-researched. If you have relatives or friends who are not aware of (or do not understand GMOs), consider buying them a copy as a gift.

I received a free reviewer copy of GMO-FREE CHILD. This book will absolutely change peoples lives! It is eye-opening, informative and well written! GMO-FREE CHILD is an invaluable wealth of knowledge. In this book April Scott takes you from oblivious to the consequences of GMOs to well informed, armed with the tools needed to better protect your loved ones for generations to come. My hope is that every parent in America reads GMO- Free Child and that we as Americans stand up and put a stop to this nutritional crisis! Rebecca Ross

She gathers the science, explains the food system clearly, and uses her criminology background to suss out the corruption in our food system. She also explains the solutions and provides inspiring testimonials. If you or your friends are concerned about allergies, a fussy baby, picky eater, behavioral issues or autoimmune conditions, grab a couple copies of this book and share it. It is up to us, moms, parents, and grandparents, to protect our families! " -Zen Honeycutt, Executive Director MomsAcross America
