Customer Reviews

"--the best.---Only book I have reviewed that actually work." -- Keith Burges, Outdoor writer and book reviewer, Australia "I have bought all eight of the previous volumes in your series, and use them regularly in teaching prehistoric/aboriginal technology..." -- Prof. John S., Dept. of Anthropology Harvard University "This is without doubt the best training guide for real primitive living skills" -- Museum of the Fur Trade Quarterly

We have spent a considerable portion of our lives in the learning of these skills, and some seven years writing them up. We well remember the physical pains that one goes through when applying some of these skills and the frustration that comes with not successfully completing them. All the little tips left out of other how-to's that we were attempting to learn from. Well, we put them here for you. This book will teach you how to accomplish these skills whether you want to learn them or not. --This text refers to an out of print or unavailable edition of this title.

This is a fantastic book. Clear pictures of what is happening to help you out. I've always heard of "brain tanning". Never seen it done until now. Also has explanations of what you are doing followed by why and what will happen if you don't say manage to work all the brain oil into the leather or whatever

I found this book really good - for me, it was better than the military SAS survival books, because it gave more details, in a context and format that made better sense. I'm no expert - hence my purchase of the book - but after reading it and following along as I tried things in it, I find I am better able to perform many of the skills it covers - and thus, more confident in my ability to survive, which can help give an edge.

great knowledge to know when gear fails and skills are what is left

This book is very informative and I have learned a lot from it. The only complaint is the pictures could be in color so you can get a better idea as to what they are talking about. The black and white sometimes make it difficult to see the pictures correctly

Only having begun to glance through it, although i am a fast reader, this book seems to be a wealth of practical and essential knowledge about surviving, living, more of the old way. Their section on making a bow is very thorough, and the writing style is nice.

Subject is well written and illustrated.

So far so good I have not had to much time to read very busy .. but its very interesting very detailed. just not enough time to read maybe I can read now during the holidays.

Buy it. If you want real quality information. This was a text book for one of my high school science classes. Back when they taught you things in high school.
