I don't do any inline racing, and only got this book to help with my ice speedskating. While the book covers both, it very clearly delineates the technique and position differences between the two. A tremendous effort is put into covering biomechanics - not only where each body part is supposed to be at each stage of the stroke, but also the most common reasons for a specific misalignments. The drills are straightforward and build step by step. They take you all the way from gliding with feet parallel in basic position, to a full push and recovery stroke. Don't expect to get the book and start flying around the track or down the road. The emphasis is on building fundamentals, one skill on top of the other, with a lot of hard work. Bottom line, this is the single best book on speedskating technique that I have read.

Book is incredible! just incredible!!! A classic!! Every speed skater sees this book as the Bible, I have read!!! Thank you so much, Barry! I hear he has a new one out too, that expands on this one,

so look for the new one also!!! The new one is called, "The Science of Speed" I believe! That's my next purchase!

Only resource I've found with regards to skating technique and training. Barry you should write another.

Barry Publow has put together a great book for anyone interested in a specific book on skating. The pictures are good, giving the reader a visual for what is being explained. The book is dated, but I have not found anything to compare it too. It is a great resource for anyone looking to get into inline or ice skating. I use the drills frequently to improve my form.

Very interesting book. Contains technique, drills and power exercises for speed skating. I very satisfied. Book that I ordered is used, so it smells of tobacco. (so rating 4)

Copyright 1999, but still a very good guide. Exercises, skating techniques, team techniques; well written. A must-read if you plan to attend a USARS Clinic and to skate competitively.

Could use some updated photos but the information is solid. It's helping me train for an upcoming marathon in CA.

simply the best to take you from walking on skates to generating speed with great form 5 out of 5 stars
